

Large Span Glass Unit Skylight

Double the Square Footage of Standard Glass Skylights with the Same Thermal Efficiency

Wasco's dramatic SkyMax doubles the square footage of our standard size flat glass unit skylights – without loss of thermal efficiency – at a fraction of the cost of structural skylights. SkyMax's one piece extruded vinyl curb incorporates a condensation channel, eliminating the need for weep holes. This, combined with high-end glazing options, maximizes its thermal performance.

- Single light up to 32 square feet – ten feet at longest dimension
- Meets most local energy codes and can meet IECC in all climate zones*
- Vinyl frame is structurally reinforced with aluminum
- Elimination of weep holes increases thermal performance

Finish Options

Wasco skylight structures are available in a broad range of colors and finishes:

- Paint: Kynar and Baked Enamel (Quaker Bronze Standard)
- Anodized: Clear, Bronze, Black
- Copper Clad

*Dependent on use of lighting controls and other factors. Contact Wasco for more information.

SAFETY CONSIDERATIONS

Skylights pose an inherent risk of injury or death from fall throughs, and the safety of others is of the utmost importance to VELUX. VELUX recommends that the customer, building owner or manager use additional protection with the skylight such as an exterior or interior safety cage, to enhance long-term safety. The building owner or manager is responsible for providing fall protection around the skylight in accordance with OSHA regulations. VELUX also recommends that the building owner or manager restrict roof access only to personnel who have been cautioned as to the location of the skylights, and warned not to sit, step or walk on the skylights.
